12. Blog Editor Design
13. Models Used — Blog Pipeline
14. Full Scoring Pipeline Flow

---

1. The 4 Blog Archetypes

Cricket content does not fall into structural categories — it falls into **emotional zones**. CricGeek classifies every blog into one of 4 archetypes based on writing intent, not word count or structure.

🔥 TYPE 1 — The Passionate Fan

> *"India deserved to lose today. Rohit's captaincy is getting worse every match. That DRS call was criminal."*

Characteristics:

- Pure emotion and strong opinions
- Minimal or zero statistics
- Reactive — often written right after a match
- May be harsh but always genuine
- Writes from the heart, not from a spreadsheet

What gets measured:

- Originality — is this their genuine voice?
- Constructiveness — passionate ≠ toxic
- Coherence — does the argument flow?
- Engagement depth — are they making a real point or just venting?

📊 TYPE 2 — The Analyst

> *"Bumrah's yorker percentage in death overs has dropped from 38% to 24%. Here's why."*

Characteristics:

- Data-driven and methodical
- Calm structured tone
- Heavy use of statistics
- Builds argument from evidence to conclusion

What gets measured:

- Stat accuracy — are the numbers real?
- Originality — fresh analysis or recycled?
- Argument structure — does data support the conclusion?
- Depth — how many angles are covered?

💭 TYPE 3 — The Storyteller

> *"I watched the 2011 World Cup final with my grandfather. When Dhoni hit that six, he cried."*

Characteristics:

- Narrative-driven and personal
- Historical or emotional perspective
- Almost no statistics
- Writing quality and resonance matter most

What gets measured:

- Writing quality — vocabulary, flow, structure
- Originality — genuine personal voice

- Emotional depth — authentic or manufactured?
- Readability — does it pull the reader through?

⚔️ TYPE 4 — The Debater

> *"Jadeja is a better all-rounder than Stokes in Asian conditions. Here's my case."*

Characteristics:

- Takes a clear position
- Mix of stats and opinion
- Builds a logical case
- Argues both sides to strengthen their stance

What gets measured:

- Argument strength — is the case logical?
- Stat usage — stats used as evidence, not decoration
- Balance — does the writer acknowledge counter-arguments?
- Originality — fresh take or generic debate?

---

2. Archetype Detection — BART-MNLI

Model: `facebook/bart-large-mnli`
Type: Zero-Shot Classification
Hosted: HuggingFace Spaces (free tier)
Cost: ₹0

How It Works

```
Blog text is submitted
      ↓
BART-MNLI receives the full blog
      ↓
4 labels are provided:
  → "passionate emotional cricket opinion"
  → "cricket data analysis and statistics"
  → "cricket storytelling and narrative"
  → "cricket debate and argument"
      ↓
Model returns probability for each:
  Analyst     → 0.71
```

```
  Debater    → 0.18
  Fan        → 0.06
  Storyteller → 0.05
      ↓
RULE: Highest score wins
0.71 → ANALYST archetype assigned
Analyst weight table loads
```

Handling Mixed Blogs

Some blogs genuinely blend two archetypes. In this case, blend scoring is applied:

```
Example detection:
  Analyst → 7/10
  Debater → 6/10
  Fan     → 2/10

Blend weights:
  Analyst → 54% of weight table
  Debater → 46% of weight table

Final BQS = weighted blend of both tables
```

No blog is forced into a box it doesn't fit.

Why BART-MNLI for This Job

- Zero-shot — no cricket-specific training data needed
- Returns probability splits, not just a single label
- Handles mixed content naturally
- Runs free on HuggingFace Spaces
- Same model also used for: claim detection, internal consistency (NLI), constructiveness detection, news categorisation

---

3. Blog Quality Score (BQS) — Scoring Components

Every blog receives a **Blog Quality Score (BQS) out of 100**. The score is built from 6 components. The weight of each component changes depending on the blog's archetype.

The 6 Components

Component	What It Measures
Stat Accuracy Score	Are the cricket statistics in the blog factually correct?

Component	What It Measures
Substance Score	Did the writer actually have something meaningful to say?
Constructiveness Score	Is the writing constructively critical vs destructively negative?
Toxicity Score	Is the writing free from abuse, personal attacks, and hate?
Information Density Score	Is the content rich and tight, or padded and repetitive?
Paragraph Coherence Score	Does the writing flow naturally from start to finish?
Argument Logic Score	Are claims made, backed, and logically structured?

---

4. Dynamic Weight Tables per Archetype

Weights shift based on what actually matters for each writing style. A storyteller is never penalised for having no stats. An analyst is never rewarded for beautiful prose if their numbers are wrong.

Component	🔥 Fan	📊 Analyst	💭 Storyteller	⚔️ Debater
Stat Accuracy	0%	30%	0%	10%
Substance Score	25%	15%	20%	20%
Constructiveness	25%	10%	15%	15%
Toxicity	15%	5%	5%	10%
Information Density	15%	15%	20%	15%
Paragraph Coherence	10%	10%	20%	10%
Argument Logic	10%	15%	20%	20%
Total	**100%**	**100%**	**100%**	**100%**

---

5. Component Deep Dives

5.1 Constructiveness Score

Replaces: Generic Sentiment Health Score
Models used: `cardiffnlp/twitter-roberta-base-sentiment-3` + `facebook/bart-large-mnli`

The principle: Negative sentiment ≠ bad writing. A frustrated fan making a sharp backed argument should score HIGH. A ranter with no substance should score LOW.

```
Two separate things measured:

1. TOXICITY (separate component)
   → Personal attacks, slurs, abuse
   → This IS harmful — penalise it

2. CONSTRUCTIVENESS (this component)
   → NOT positive vs negative
   → Constructive vs Destructive
```

How constructiveness is detected:

After RoBERTa flags negative sentiment, BART checks the next 2 sentences for:

- Reasoning words: `"because"`, `"since"`, `"therefore"`, `"this shows"`, `"the data suggests"`
- Evidence: stats, match references, examples
- Alternatives: `"instead"`, `"should have"`, `"better option"`

Scenario	Score
Negative + strong reasoning	85–100
Negative + some reasoning	60–80
Negative + no reasoning	30–50
Pure venting, no substance	10–30

Example:

> ✅ High score: *"Rohit's captaincy lacks adaptability because in 6 consecutive matches he has not changed field placements despite clear patterns"*
> ❌ Low score: *"Rohit is useless, always has been, always will be, drop him"*

5.2 Toxicity Score

Model: `unitary/toxic-bert`
Hosted: Oracle Cloud VM
Cost: ₹0

Completely independent from constructiveness. A blog can be:

- Negative and clean (scores high on toxicity)
- Positive and toxic (scores low on toxicity)

Catches: personal attacks, subtle abuse, dog whistles, hate speech.

Result	Score
Clean — no toxic markers	90–100
Borderline — mild personal criticism	55–80
Toxic — personal attacks detected	0–40

5.3 Stat Accuracy Score

Models: `dslim/bert-base-NER` + Rule Engine + Sportmonks API
Cost: ₹0 (API already budgeted)

Only applies to: Analyst (30% weight) and Debater (10% weight). Zero weight for Fan and Storyteller — they are not penalised for writing without stats.

Pipeline:

```
Blog text
  ↓
BERT-NER extracts:
  → Player Name: "Virat Kohli"
  → Stat Type: "average"
  → Format: "ODI"
  → Value: "58.7"
  ↓
Query Sportmonks API database
  ↓
Compare extracted vs real value
  → Within 2% margin → PASS ✅
  → Outside margin → FLAG ⚠️
  → Unverifiable → NEUTRAL (not penalised)
  → Wrong → FAIL ❌
  ↓
Stat Accuracy = (Passed / Verifiable) × 100
```

Example output:

```
Stats Found:      7
Verified Pass:    3
Within Margin:    1
Unverifiable:     2 (neutral)
Failed:           1

Accuracy Score = (3+1) / (7-2) × 100 = 80/100
```

Flagged stats are shown to the writer with the correct value. The blog reader also sees a stat verification panel.

5.4 Substance Score

Models: dslim/bert-base-NER + sentence-transformers/all-MiniLM-L6-v2 + facebook/bart-large-mnli + Rule Engine

Purpose: The universal quality fallback. Works for every archetype regardless of whether stats exist. Answers one question: *"Did this person actually have something to say?"*

4 Sub-components:

SPECIFICITY (30%) Generic: *"Kohli is a great batsman"* → low score
Specific: *"Kohli's conversion rate of 50s to 100s in away Tests dropped after 2020"* → high score

Measured by BERT-NER entity density — named entities, time references, conditional qualifiers per statement.

PERSPECTIVE ORIGINALITY (30%) MiniLM compares the blog's core argument against the top 50 most common cricket opinions in the database.

Opinion	Score
"Kohli is GOAT" — very common	20/100
Specific unconventional angle	85/100

INTERNAL CONSISTENCY (25%) BART-MNLI Natural Language Inference function feeds sentence pairs from the same blog and checks for contradictions.

Contradictions found	Score
None	100/100
1 contradiction	65/100
2+ contradictions	30/100

COMPLETENESS SIGNAL (15%) Rule-based check:

Signal	Points
Has an opening context	+25
Has a developed middle section	+35
Has a closing thought	+25
Title matches content	+15

Final formula:

```
Substance Score =
  (Specificity × 0.30) +
  (Perspective Originality × 0.30) +
  (Internal Consistency × 0.25) +
  (Completeness Signal × 0.15)
```

5.5 Information Density Score

Replaces: Word Count (which rewarded padding, not quality)
Models: `dslim/bert-base-NER` + `sentence-transformers/all-MiniLM-L6-v2` + Rule Engine

Principle: A 200-word razor-sharp blog should beat a 900-word padded blog every time.

Formula:

```
Density = Meaningful Units / Total Words × scaling factor
```

Meaningful units counted by:

- Unique cricket references (BERT-NER)
- Claims made (BART)
- Evidence provided (Rule Engine)
- Unique concepts introduced (MiniLM semantic clustering)

Example:

Blog	Words	Meaningful Units	Density	Score
Sharp 200-word piece	200	18	0.090	92/100
Padded 900-word piece	900	21	0.023	41/100

Repetition Penalty: MiniLM clusters all sentences semantically. If multiple sentences have cosine similarity > 0.85, they are saying the same thing twice.

Repeated ideas	Penalty
0 repeats	None
1–2 repeats	−5 points
3–4 repeats	−12 points
5+ repeats	−25 points

5.6 Paragraph Coherence Score

Model: sentence-transformers/all-MiniLM-L6-v2

Each paragraph is converted to an embedding. Cosine similarity is measured between consecutive paragraphs.

- High similarity = content flows naturally → high score
- Low similarity = blog jumps around randomly → low score

Score = average coherence across all paragraph pairs (0–100).

5.7 Argument Logic Score

Models: facebook/bart-large-mnli + sentence-transformers/all-MiniLM-L6-v2 + dslim/bert-base-NER + Rule Engine

5 Sub-components:

CLAIM DETECTION (25%) BART-MNLI identifies sentences that make a claim.

Claims found	Score
0 claims	20/100
1–2 claims	50/100
3–4 claims	75/100
5+ claims	95/100

EVIDENCE PRESENCE (30%) After each claim, the next 3 sentences are checked for:

- Stats (BERT-NER)
- Reasoning words: "because", "since", "therefore", "this shows", "historically"
- Match references (BERT-NER)

```
Score = (Backed claims / Total claims) × 100
```

COUNTER ACKNOWLEDGEMENT (20%) Rule engine detects: "however", "despite this", "critics might argue", "on the other hand", "while X is true"

Found	Score
None	40/100
1–2 found	70/100
3+ found	95/100

LOGICAL FLOW (15%) MiniLM embeds the first paragraph and last paragraph. Cosine similarity between them.

High similarity = argument stayed on track. Low similarity = argument drifted.

POSITION CLARITY (10%) Rule engine detects: "I believe", "clearly", "my argument is", "in conclusion", "the answer is"

Clarity	Score
Clear strong position	80–100
Vague / sits on fence	40–60
No position at all	20–40

Final formula:

```
Argument Logic =
  (Claim Detection × 0.25) +
  (Evidence Presence × 0.30) +
  (Counter Acknowledgement × 0.20) +
  (Logical Flow × 0.15) +
  (Position Clarity × 0.10)
```

5.8 Writing Depth Score (Inside Information Density)

5 Sub-components within Writing Depth:

Sub-component	Weight	How Measured
Information Density	20%	Meaningful units / total words
Lexical Diversity	25%	Unique words / total words
Sentence Variety	15%	Standard deviation of sentence lengths
Paragraph Coherence	25%	MiniLM consecutive paragraph similarity
Cricket Context Depth	15%	BERT-NER count of cricket-specific references

Lexical Diversity scoring:

Ratio	Score
< 0.40	20/100
0.40–0.55	45/100
0.55–0.65	65/100
0.65–0.75	80/100
> 0.75	100/100

Cricket Context Depth scoring:

References	Score
0 references	20/100
1–3 references	50/100
4–6 references	70/100
7–10 references	85/100
10+ references	100/100

---

6. Three Scored Blog Examples

Blog 1 — 🔥 Passionate Fan

> *"India had no business losing that match yesterday. Rohit Sharma's captaincy has become predictable and lazy. Every opposition now knows exactly what India will do in the last 5 overs. Hardik came in too late, the field placements were criminal, and don't even get me started on that DRS decision we wasted in the 40th over. This team has the talent but zero tactical brain at the top. Deeply frustrated as a fan who has watched every single match this season."*

Step 1 — BART DNA Classification:

```
Analyst    → 0.08
Debater    → 0.31
Fan        → 0.54 ✅ WINNER
Storyteller → 0.07

→ Archetype: 🔥 PASSIONATE FAN
```

Step 2 — Component Scores:

Component	Score	Notes
Constructiveness	61/100	Negative but genuine frustration, no reasoning words
Toxicity	84/100	Clean — criticising captain, not attacking as a person
Originality	82/100	Genuine personal voice, low cosine similarity
Stat Accuracy	N/A	0 stats found — weight redistributed
Information Density	66.6/100	195 words, decent density
Paragraph Coherence	62/100	Flows reasonably, some topic jumping
Argument Logic	51.5/100	4 claims, 0 backed with evidence, no counter acknowledgement

Final BQS Calculation (Fan weight table):

```
BQS = (0.61×25) + (0.84×15) + (0.82×15) + (0.67×15) + (0.62×10) + (0.52×10)
    ≈ 71.15 / 100
```

Blog 1 Final Score: 71.15 / 100

Blog 2 — 📊 Analyst

> *"Jasprit Bumrah's death over economy has shifted significantly in 2024. In IPL 2022 his death over economy was 8.2, in 2023 it rose to 9.1, and in 2024 it has climbed to 10.4. His yorker percentage in overs*

> *17-20 has dropped from 38% to 24%. The data suggests batters have started using the crease more effectively against him. However his dot ball percentage remains elite at 31%, which explains why teams still back him. His wicket-taking ability at 1 wicket per 11.3 balls still outperforms most alternatives."*

Step 1 — BART DNA Classification:

Analyst → 0.71 ✅ WINNER
Debater → 0.18
Fan → 0.06
Storyteller → 0.05

→ Archetype: 📊 ANALYST

Step 2 — Stat Validation:

Stat 1: Death economy 2022 → 8.2 | API: 8.4 → ✅ Within margin
Stat 2: Death economy 2023 → 9.1 | API: 9.1 → ✅ Exact
Stat 3: Death economy 2024 → 10.4 | API: 10.7 → ⚠️ Slight mismatch
Stat 4: Yorker % 2022 → 38% | API: N/A → ⚠️ Unverifiable
Stat 5: Yorker % 2024 → 24% | API: N/A → ⚠️ Unverifiable
Stat 6: Dot ball % → 31% | API: 29% → ❌ Mismatch
Stat 7: Wicket/11.3 balls | API: 11.1 → ✅ Within margin

Stat Accuracy = (3+1) / (7-2) × 100 = 80/100

Step 3 — Component Scores:

Component	Score
Stat Accuracy	80/100
Constructiveness	88/100
Toxicity	97/100
Originality	79/100
Information Density	71/100
Paragraph Coherence	81/100
Argument Logic	83.95/100

Blog 2 Final Score: 83.15 / 100

Blog 3 — 💭 Storyteller

> *"My father never explained cricket to me with rules. He explained it with silences. The long pause before a Dravid cover drive. The held breath before a Kumble delivery hit the rough. I grew up in a house where the television volume meant nothing — it was my father's posture that told me if India was winning or losing. When MS Dhoni hit that six in 2011, my father didn't cheer. He just sat back, closed his eyes, and exhaled slowly. That exhale was thirty years of waiting. Cricket in our house was never a sport. It was the language we never learned to speak any other way."*

Step 1 — BART DNA Classification:

```
Analyst    → 0.03
Debater    → 0.09
Fan        → 0.21
Storyteller → 0.67 ✅ WINNER

→ Archetype: 💭 STORYTELLER
```

Step 2 — Component Scores:

Component	Score	Notes
Constructiveness	95/100	Deeply positive emotional tone
Toxicity	99/100	Zero toxicity markers
Originality	91/100	Highly personal, near unique voice
Stat Accuracy	N/A	0 stats — not applicable
Information Density	82.25/100	Rich vocabulary, high lexical diversity 0.81
Paragraph Coherence	94/100	Exceptional flow throughout
Argument Logic	57.15/100	1 soft claim, no hard evidence — expected for this archetype

Blog 3 Final Score: 91.15 / 100

Combined Summary

	Blog 1 🔥	Blog 2 📊	Blog 3 💭
BART Archetype	Fan (0.54)	Analyst (0.71)	Storyteller (0.67)
Constructiveness	61/100	88/100	95/100

	Blog 1 🔥	Blog 2 📊	Blog 3 💭
Toxicity	84/100	97/100	99/100
Originality	82/100	79/100	91/100
Stat Accuracy	N/A	80/100	N/A
Information Density	66.6/100	71/100	82.25/100
Argument Logic	51.5/100	83.95/100	57.15/100
Final BQS	**71.15**	**83.15**	**91.15**

---

7. Writer DNA Profile System

Model: facebook/bart-large-mnli
Update method: Rolling 80/20 weighted average

How DNA Is Built

Every blog a writer submits, the BART-MNLI archetype probability scores become that blog's DNA contribution.

```
New DNA = (Existing DNA × 0.80) + (New Blog DNA × 0.20)
```

Why 80/20:

- One blog cannot suddenly change who you are as a writer
- Consistent writing gradually and honestly builds your identity
- Cannot be gamed by writing one type of blog suddenly

What DNA Looks Like on Profile

After 15 blogs:

```
📊 Analyst   ▓▓▓
```

```
│ 📍 Mumbai | ✍️ 23 blogs          │
│ 💎 Diamond Analyst               │
├──────────────────────────────────┤
│      WRITER DNA                  │
│                                  │
│ 📊 Analyst  ▓▓▓▓▓▓▓▓▓▓▒▒▒▒  45%  │
│ ⚔️ Debater  ▓▓▓▓▓▓▒▒▒▒▒▒▒▒  30%  │

│ Consistency      → ▓▓▓▓▒ High    │
└──────────────────────────────────┘
```

---

8. Writer Titles

Based on dominant DNA percentage, every writer earns a public title shown on their profile.

Dominant %	Title	Meaning
Analyst > 50%	**THE ANALYST**	Numbers first, always
Debater > 50%	**THE DEBATER**	Never backs down
Fan > 50%	**THE HEARTBEAT**	Pure cricket soul
Storyteller > 50%	**THE NARRATOR**	Cricket through emotion
No single type > 40%	**THE ALL-ROUNDER**	Rarest type, most respected

THE ALL-ROUNDER is intentionally the hardest to achieve — requires consistent quality across all 4 styles. It is the most prestigious writer identity on CricGeek.

---

9. Badge System

Blogger Credibility Score (BCS) Formula

```
BCS = (Average BQS × 0.50)
    + (Depth Score lifetime × 0.20)
```

+ (Community upvotes × 0.15)
+ (Consistency bonus × 0.10)
+ (Stat accuracy bonus × 0.05)

Consistency bonus = writing regularly without quality drops
Stat accuracy bonus = bonus multiplier only, not a penalty for opinion writers

Badge Tiers

Badge	BCS Range	Requirements
🥉 Bronze Scribe	0–40	Minimum 1 blog published
🥈 Silver Analyst	41–65	Min 5 blogs, avg BQS > 55
🥇 Gold Correspondent	66–80	Min 10 blogs, avg BQS > 70, stat accuracy > 75%
💎 Diamond Expert	81–92	Min 20 blogs, avg BQS > 80, stat accuracy > 85%
🏏 CricGeek Verified Analyst	93–100	Manually reviewed, all metrics elite

Badge Protection Rules

- Badges do **not** drop instantly — a 90-day rolling average protects writers from one bad blog
- If a writer's 90-day BCS drops below their badge threshold for **30 consecutive days** → badge downgrades
- This prevents gaming and rewards consistency over time

Archetype Badge Labels

Badges also carry archetype flavour:

Badge	Extra Tag Example
🥇 Gold Correspondent	"Gold Analyst" or "Gold Storyteller"
💎 Diamond Expert	"Diamond Analyst" or "Diamond Debater"
🏏 Verified CricGeek	Unlocks across all archetypes — true all-rounder

---

10. DNA Achievements

Separate from quality badges. Based purely on writing identity milestones.

Achievement	Condition
🔬 Pure Blood Analyst	Analyst DNA > 70% across 10+ blogs
🗣️ Voice of the Fans	Fan DNA > 70% across 10+ blogs
📖 The Chronicler	Storyteller DNA > 65% across 8+ blogs
⚡ The Contrarian	Debater DNA > 65% across 8+ blogs
🌐 True All-Rounder	No archetype below 20% across 15+ blogs
🔀 Shape Shifter	DNA primary type shifted at least twice

A writer can be a **low-quality Analyst** or a **high-quality Fan**. Quality badges and DNA achievements measure completely different things.

│ Archetype Match: 📊 ANALYST ✅       │
└──────────────────────────────────────┘
```

Section 4 — Live Match Context Banner

Only shows if blog is about a currently live or recent match.

```
┌──────────────────────────────────────┐
│ 🔴 LIVE CONTEXT                      │
│ IND vs AUS • 2nd ODI                 │
│ IND: 187/4 (32.4 ov)                 │
│ Blog written during this match       │
│ [VIEW LIVE SCORECARD →]              │
└──────────────────────────────────────┘
```

Section 5 — Blog Content Area

Typography:

- Large readable font, generous spacing
- Cricket green accent for key quotes
- Verified stats displayed in blue data boxes:

```
┌──────────────────────┐
│ 📊 STAT              │
│ Bumrah economy 2024  │
│ 10.4                 │
│ ✅ Verified by       │
│   CricGeek           │
└──────────────────────┘
```

Stat inline markers:

- ✅ Green tick = verified
- ⚠️ Grey = unverifiable
- ❌ Orange flag = wrong (correction shown)

Player name tap cards: Tap any player name in the blog → mini card overlays:

- Photo + current form + career average
- Non-intrusive, keeps reader in the blog

Section 6 — Reading Progress Bar (Cricket Over Counter)

```
[ 🏏 ▓▓▓
```

```
┌──────────────────────────────────────┐
│ 🏏 TAP TO GIVE RUNS  [⚾ ⚾ ⚾ ⚾ ⚾ ⚾] │
│ 1,247 runs from 203 readers          │
│                                      │
│ [💬 47]  [🔖 Save]  [📤 Share]       │
└──────────────────────────────────────┘
```

Section 8 — The Cricket Ball Runs System

Replaces generic "likes" entirely.

Taps	Runs	Meaning
1 tap	1 Run	Good read
2 taps	2 Runs	Really good
3 taps	3 Runs	Excellent
4 taps	4 Runs	Boundary level
5 taps	5 Runs	Outstanding
6 taps	6 — SIX!	Masterpiece

Animation for SIX:

- Confetti burst
- Ball flies over boundary rope
- "SIX!" appears in stadium font
- Optional crowd cheer sound (toggleable)

Display: 🏏 847 runs from 203 readers

Section 9 — Stat Snapshot Sidebar

Auto-generated from blog content by BERT-NER.

```

Section 12 — Views Counter System

Counted as 1 view when:

- Human reader (not bot)
- Spent 10+ seconds on page
- Scrolled at least 20%
- Unique per user per 24 hours

Not counted:

- Page load alone
- Bot traffic
- Owner's own views
- Under 10 seconds on page

Milestone celebrations:

Views	Notification
100	"🎉 Century! 100 readers"
1,000	"🎸 Your blog hit 1000 views!"
10,000	"💎 VIRAL — 10,000 readers" — Featured on homepage

Visual Design Language

Element	Detail
Primary colour	Cricket pitch green
Secondary	Deep navy (night match sky)
Accent	Gold (stumps/bails)
Data colour	Electric blue
Warning	Amber
Error	Red (danger ball)
Headlines	Bold, strong, authoritative
Body text	Clean, readable, generous spacing
Stats	Monospace (scoreboard feel)

Micro Animations:

- Cricket ball bounce on run tap
- Scoreboard flip for view counter
- Stump animation on page load
- Over counter ticking up
- Boundary rope animation on SIX rating

---

12. Blog Editor Design

Three-Zone Layout

```
┌──────────────────┬──────────────────────────┬──────────────────┐
│                  │                          │                  │
│  CRICKET         │  WRITING PITCH           │  LIVE STATS      │
│  TOOLKIT         │  (Main Editor)           │  SIDEBAR         │
│  (Left)          │  (Center)                │  (Right)         │
│                  │                          │                  │
└──────────────────┴──────────────────────────┴──────────────────┘
```

On mobile: Center only, left and right panels slide in on tap.

Writing Pitch — Center

Title area:

- As writer types title, BERT-NER detects player/team names
- Right sidebar auto-populates with their live stats
- Hint displayed: *"Great titles are specific: 'Why Bumrah's economy is rising' not 'Bumrah is declining'"*

Cover image:

[📁 Upload your own]

OR choose from CricGeek library:
[🏟️ Stadiums] [🏏 Action shots]
[🌍 Tours] [🏆 Trophies]

OR auto-match from title:
"Bumrah detected → 3 images found"
[Image 1] [Image 2] [Image 3]

Writing surface placeholder (rotates):

- *"Start your innings here..."*
- *"Bowl your first delivery..."*
- *"Step up to the crease..."*

Formatting toolbar:

BATTING ORDER (text):
[B] [I] [U] → Bold, Italic, Strikethrough

FIELD PLACEMENTS (structure):
[H1] [H2] → Headers
[" "] → Pull Quote
[• •] → Bullet list
[1. 2.] → Numbered list
[———] → Section divider

EXTRAS (media inserts):
[🖼️] → Image insert
[📊] → Stat card insert
[🏏] → Player card insert
[📹] → Video embed
[🔗] → Link

Stat Card Insert (`@stat` command):

```
INSERT STAT CARD
Player: [Virat Kohli      ▼]
Format: [ODI              ▼]
Stat:   [Batting Average  ▼]

Auto fetched: 58.18
✅ Verified from Sportmonks

[INSERT STAT CARD]
```

Player Card Insert (`@player` command):

```
INSERT PLAYER CARD
Search: [Rohit Sharma]

Preview:

┌──────────────────────────┐
│ [Photo]  Rohit Sharma    │
│ IN India • Opener        │
│ ODI Avg: 49.2            │
│ T20 SR:  139.4           │
│ Form: 🟢 Good            │
└──────────────────────────┘

[INSERT MINI CARD]  [INSERT FULL CARD]
```

Cricket Toolkit — Left Panel

Tool	What It Does
📊 Stats Finder	Search any player stat instantly from Sportmonks — copy or insert directly
🆚 Comparator	Compare 2 players side by side, insert as formatted table
📰 Match Ref	Find and link any historical match
✅ Fact Checker	Type any stat → verified against API before writing
📁 My Drafts	All saved drafts with auto-named titles
🖼️ Image Library	Cricket image library (Sportmonks + licensed sources)
📋 Templates	Match Review / Player Analysis / Debate Format / Opinion Piece

Fact Checker example:

```
Type: "Kohli ODI average is 58.7"
[CHECK THIS FACT]

RESULT: ❌ Incorrect
Actual: 58.18
Source: Sportmonks API
[USE CORRECT STAT]
```

H2H Comparator example:

```
[Kohli] vs [Root] | FORMAT: [Test ▼]

            Kohli    Root
Matches:      113      138
Average:     49.4     50.7
100s:          29       32
Away avg:    45.2     52.1

[INSERT COMPARISON TABLE]
```

Live Stats Sidebar — Right Panel

Auto-populates based on what the writer is typing. BERT-NER reads the writing in real time.

📊 LIVE STATS — Auto detected

Detected: Bumrah • Kohli • Wankhede

BUMRAH
ODI Economy 4.63 ✅
ODI Wickets 149 ✅
Last match 3/34 ✅

KOHLI
ODI Average 58.18 ✅
Form 🟢 Excellent

WANKHEDE
Avg 1st inn 287 ✅
Toss bat 1st 67% wins ✅

💡 SUGGEST:
Add H2H data for Bumrah
vs AUS top order?
[INSERT →]

Writing Metrics Bar

Fixed at bottom of writing pitch. Always visible.

📝 347 words • Overs: 3.5 of 10
📊 Stats: 4 found • ✅ 3 verified
🎯 Quality estimate: 71/100
💡 Add more depth to boost score

Over counter metaphor:

- 50 words = 1 over
- 0–3 overs: *"Just starting your innings"*
- 3–6 overs: *"Building nicely"*
- 6–10 overs: *"Solid innings developing"*
- 10+ overs: *"A proper Test innings"*

Font System

Style	Feel	Best For
THE CLASSIC	Clean serif, professional	Stat-heavy analyst blogs
THE CORRESPONDENT	Modern sans-serif, authoritative	Opinion and debate
THE STORYTELLER	Warm, rounded, personal	Stories and memories
THE PUNDIT	Bold condensed, confident	Hot takes and debates

Day / Night Mode

Mode	Visual
Day Mode	Bright cream background, green accents, energetic
Night Mode	Deep navy background, floodlight gold accents, immersive

Floodlight animation plays when switching to night mode.

Auto Save

Saves every 30 seconds. Displays briefly:

> *" 🏏 Your innings is saved"*

If connection drops:

> *" ⚠️ Rain delay — saving locally"*

Drafts auto-named by detected topic:
`"Bumrah Analysis Draft — 2:34 PM"` not `"Untitled Draft 1"`

Submission Experience

13. Models Used — Blog Pipeline

#	Model	Source	Size	Purpose	What It Produces
1	cardiffnlp/twitter-roberta-base-sentiment-3	HuggingFace	~500MB	Detects writing tone — positive, negative, neutral	Constructiveness Score (0–100)
2	unitary/toxic-bert	HuggingFace	~400MB	Scans for abuse, personal attacks, subtle toxicity	Toxicity Score (0–100)
3	sentence-transformers/all-MiniLM-L6-v2	HuggingFace	~80MB	Semantic meaning vectors — most hardworking model	Originality, Coherence, Repetition penalty, Logical flow, Perspective originality
4	facebook/bart-large-mnli	HuggingFace	~1.6GB	Zero-shot archetype classification	Writer DNA scores, Claim detection, Internal consistency, Constructiveness detection
5	dslim/bert-base-NER	HuggingFace	~400MB	Named entity extraction from cricket text	Player + stat extraction, Cricket context depth, Specificity measurement
6	Custom Rule Engine	Pure Python	Minimal	Logic-based detection — no ML needed	Reasoning words, Counter acknowledgement, Position clarity, Completeness, Evidence presence, Information density

Model Hosting

Model	Hosted On	Cost
BART-MNLI	HuggingFace Spaces (free tier)	₹0
BART-CNN	HuggingFace Spaces (free tier)	₹0
MiniLM, BERT-NER, Toxic-BERT, RoBERTa	Oracle Cloud Free VM 2	₹0
Rule Engine	Oracle Cloud Free VM 1	₹0
Total		**₹0**

---

14. Full Scoring Pipeline Flow

```
BLOG SUBMITTED
    │
    ▼
STEP 1 — PRE-PROCESSING (Pure Python)
  → Clean text
  → Count words
  → Split sentences + paragraphs
  → Calculate lexical diversity
  → Calculate sentence variety
  → Check completeness
    │
    ▼
STEP 2 — ALL MODELS RUN IN PARALLEL
  ┌──────────┬──────────┬──────────┬──────────┐
  ↓          ↓          ↓          ↓
RoBERTa  Toxic-BERT  MiniLM     BART-MNLI
Tone     Toxicity    Embeddings Archetype +
Score    Score       for all    DNA scores +
                     paras/sents Claims + NLI
  │          │          │          │
  └──────────┴──────────┴──────────┴──────────┘
          │
          ↓
      BERT-NER
      Entities + stats extracted
          │
          ↓
STEP 3 — SPORTMONKS API
```

```
  → Stat validation for each extracted stat
  → Within 2% = PASS, outside = FLAG
      |
      ▼
STEP 4 — RULE ENGINE (Pure Python)
  → Constructiveness calculation
  → Evidence presence
  → Counter acknowledgement
  → Position clarity
  → Information density
  → Repetition penalty
  → Completeness signal
      |
      ▼
STEP 5 — ARCHETYPE DECISION
  → BART scores arrive
  → Highest probability wins
  → Correct weight table loads
      |
      ▼
STEP 6 — SCORE ASSEMBLY
  → All component scores combined
  → Archetype weight table applied
  → BQS (0–100) calculated
      |
      ▼
STEP 7 — WRITER PROFILE UPDATE
  → BQS stored to MongoDB
  → DNA rolling average updated (80/20)
  → BCS recalculated
  → Badge checked + updated
  → Achievements checked
  → Writer notified
```

Processing time estimate:

```
Pre-processing    →  0.1 seconds
Models (parallel) →  0.8–1.2 seconds
Rule Engine       →  0.1 seconds
API validation    →  0.5 seconds
Score assembly    →  0.1 seconds
──────────────────────────────────────
Total (parallel)  →  ~1.4–2.0 seconds
```

Blog shows as "Under Review" while pipeline processes in background via **Celery + Redis** async queue. Score appears without the writer needing to wait or refresh.
